

IDM HL7 Interface for Healthcare

IDM HL7 Interface for Healthcare, from EST Group, is an integration solution based on the Health Level 7 (HL7) Interoperability Standard. The IDM HL7 Interface bridges the gap between financial and administrative applications utilizing the HL7 interface capabilities of each clinical application.

With the IDM HL7 Interface for Healthcare, the Novell Identity Management Engine can now be integrated with an HL7 Interface Engine to allow seamless data interaction with HL7 compliant systems. IDM HL7 Interface enables data synchronization and bi-directional communication of HL7 messages across multiple platforms.

The IDM HL7 Interface for Healthcare leverages the HL7 capabilities of financial and administrative applications and ships with templates for the following HL7 Messages:

- MSH
- MSA
- ERR
- EVN
- STF
