Secure Access to Your Student Information System – Anytime, Anywhere!

Are you an Alabama School System that needs to provide access via the Internet to the **Alabama Student Information System**, but you have the following concerns:

- Will student information be exposed to the Internet?
- How do I deal with security issues related to web-based applications?
- How much resources will it take to provide secure access?

We have the solution – Our Secure Access Bundle:

- Removes direct access to systems holding confidential student information
- Limits exposure to security issues for web-based applications
- Dramatically reduces resource requirements to implement secure, web-based applications

Allowing teacher, parent and student access from the Internet can put your confidential data at risk. Social Security numbers, home addresses, school financial records and other personal and confidential data will be targets. But Syndesi Solutions has a Secure Access Bundle that can allow access to STI iNOW, SETS Web and other web services without compromising security on other systems.

Syndesi Solutions uses the same products and technology used by The Pentagon, The White House and other highly secure organizations. Our solution is very cost effective, will fit your budget and extremely customizable to satisfy your needs.

Contact us today for a free consultation and demo.
